

Fish Stocking

This flowage has a wide range of fish from pan fish to muskies, however, recently there has been a decrease in walleyes. To compensate for this our Association has worked with the DNR to have additional Walleyes stocked. The first stocking was achieved in 2006 when 8,000 finger length walleyes were released. Since the DNR usually releases stocked fish from shore at a boat landing, we had volunteers in a boat release them near weed beds and our sunken fish cribs. More stocking is anticipated.
